District Manager
Ministry of the Environment
London District Office
C/o
Mr. Bob Slivar
Provincial Officer
733 Exeter Rd.
London, Ont.

Dear Sir:

RE: 2012 Year-End Report containing Reports on the Biosolids Land Application Program, the Storm Water Management Facility for the Biosolids Centralized Storage Facility (BCSF), and the Inspection of the BCSF

Attached is the monitoring report for 2012 for Oxford County's biosolids land application program from the BCSF (storage site for Woodstock, Tillsonburg, and Ingersoll WWTPs), and the Thamesford WWTP Liquid Storage Tank. Also included is a report on the Storm Water Management Facility and an inspection report for the BCSF.

I trust this report fulfills the intent of the annual reporting requirements of the Certificates of Approval now referred to as Environmental Compliance Approval (ECA) #'s A800939, 3816-76HRTS, 5950-7XQKXS, 9997-82RS5A, 6974-6FKKAY, 5936-8RKNU, 0342-7WCKCJ, and 8633-76AHSG. If there are any questions, please contact me.

Yours truly,

Don Ford, BA, CMM II, C. Tech.
Wastewater Supervisor, County of Oxford

c.c. Mr. Shahab Shafai, M.Sc., P.Eng.
Manager Wastewater Services, Oxford County
Mr. Mark Maxwell, P.Eng.
Project Engineer, Oxford County

Overview of the Biosolids Land Application Program

Oxford County owns and operates nine wastewater treatment plants within the County; namely, Woodstock Wastewater Treatment Plant (WWTP), Ingersoll WWTP, Tillsonburg WWTP, Thamesford WWTP, Drumbo Sequencing Batch Reactor (SBR), Norwich Lagoons, Plattsburg Lagoons, Tavistock Lagoons, and the Mount Elgin recirculating sand filter (RSF). The four larger mechanical plants generate biosolids on a daily basis while the other systems inventory the material within their treatment systems over long periods of time, or in the case of Drumbo SBR, have it transported to another facility (Woodstock) on a weekly basis for treatment.

Of the four larger mechanical plants, two plants digest material anaerobically (Woodstock and Ingersoll) and two digest biosolids aerobically (Thamesford and Tillsonburg). Woodstock WWTP produces roughly half of all the biosolids produced in the County excluding lagoons and traditionally has landfilled this material while the other plants traditionally used a combination of some land application and some landfilling of the material. This changed recently with the implementation of the Biosolids Management Master Plan (BMMMP) with dewatering at three of the four mechanical plants and biosolids taken for storage at the Biosolids Centralized Storage Facility (BCSF) for application to land as a nutrient.

Oxford County Biosolids program was the winner of the 2008 Biosolids Award from the Water Environment Association of Ontario for small producers. There are five main elements of the Biosolids Management Master Plan which include; more enforcement of the Oxford County Sewer use by-law, dewatering of stabilized biosolids at each of the major wastewater treatment plants, transporting thickened sludge from smaller plants to the nearest major wastewater treatment plant for processing, land application of all biosolids on farms having a non-agricultural source material (NASM) plan, and centralized storage of biosolids when the material cannot be land applied.

The enforcement of the Oxford County sewer use bylaw was an important step, and to this end Oxford County hired two enforcement personnel, one staff member in 2006 and a second in 2009. Also the wastewater division acquired additional sophisticated automatic sampling equipment. These changes were made with the goal of improving the quality and reducing the quantity of biosolids produced.

Ingersoll WWTP produced only a limited amount of dewatered biosolids this year as the digester upgrade was only completed in July and the dewatering construction project started in October. The majority of material was trucked daily to the Woodstock Wastewater Treatment Plant.

Oxford County also tendered the cleanout of two digesters in 2012 and the material was screened and land applied.

The Biosolids from all facilities were compliant with the Nutrient Management Act (NMA) regulations governing NASM.

Sampling Description

A sample is collected from each bin that leaves the wastewater treatment plants and composted over a two week period. This is then sent out for analysis of eleven metals, nutrients and E.coli. The frequency would be consistent with the minimum required frequency for small generators per NMA.

As a small generator, our sampling program will ensure two samples within 30 days of land application and two additional samples within 90 days for nutrients. This can be accomplished by monthly sampling of the biosolids and additional sampling during biosolids removal.

The samples are analyzed by SGS Lakefield Research Ltd., a CAEAL certified lab. The results are entered into an excel spreadsheet and checked for compliance to the regulations at the time of being entered. The analytical results of the dewatered biosolids are also summarized on an annual spreadsheet to calculate monthly and yearly averages.

Biosolids analysis is provided to the contractor and farmer for their use at the time of land application by directly providing the sample analysis to the biosolids contracted land applier in PDF format when received electronically from the external lab.

Discussion of Results

Table 1 highlights the analytical results for metals versus the NMA maximum criteria. All sources were compliant and were acceptable to be used as a nutrient for the land application program. More information can be found in Exhibit 1 for analytical results for different sources of biosolids.

The biosolids were resampled at the farm at the time of application and those results may be found in Exhibit 2, these samples provide a further check on the quality of the material and all samples complied with the NMA criteria as well.

The Biosolids contractor provides Nutrient reports to individual farmer on each application to aid in the beneficial use of the product as a nutrient. The contractor's table of NASM plans indicating spreading applications is included in Exhibit 3.

In summary, Oxford County's Biosolids Management program provided for the effective production, transport, storage, and eventual reuse as a nutrient via land application of all biosolids generated under the program. All operation and maintenance activities were performed by Oxford County staff in the wastewater treatment plants. The transportation of the biosolids from the facilities to the storage building was done through a contractor working on Oxford County's behalf. There were no notable upsets or spills during the year of operation and no complaints have been received to date.

Comparison of Generated Biosolids to NMA Criteria for Metals in mg/kg Dry Solids

Table 1

Parameter	Woodstock WWTP	Ingersoll WWTP	Tillsonburg WWTP	Thamesford WWTP	NMA Metals Criteria
Metals mg/kg dry solids	2012 Annual Average	2012 Annual Average	2012 Annual Average	2012 Annual Average	Maximum
Arsenic	4.9	3.4	3.4	16	170

Selenium	4.05	10	5	16	34
Zinc	1034	1667	760	360	4200

Biosolids Centralized Storage Facility (BCSF) Operation

The Biosolids Centralized Storage Facility (BCSF) was built for the dewatered biosolids for periods such as winter months when the dewatered product cannot be directly land applied. The storage building is designed to provide a minimum of 240 days storage. It is also designed with segregated storage bays so that should material be determined to be non-compliant, it can be removed and taken to landfill and not mixed with compliant biosolids destined for land application. Please see in Table 2 below the biosolids production rate, type, and destination.

The BCSF is located near Salford, Ontario adjacent to the Oxford County Landfill and behind the compost area. This location was selected after public consultation through a Class Environmental Assessment process and involvement of the local landfill liaison committee. It is operated in such a way as to minimize the impact to neighbours as all the loading and unloading activities take place inside the building. The location is far enough back and surrounded by Oxford County buffer lands as to prevent nuisance dust or noise from impacting neighbours. Trees have also been planted to help with the visual impact of the large building.

The building has sufficient room to house 7,000 m³ of material and would be built in two phases. The existing phase includes 12 bays; and a future phase 2 would add an additional four bays. The facility has sufficient space to accommodate the 240-day storage requirements for the plants, although not all systems will dewater and store at first. Thamesford WWTP will stay with a liquid land application program for the time being and phased in to dewatering in future. The individual bays are slightly inclined with cement walls to allow for easy piling of the material. The incoming material is segregated by system and month and is deposited in the appropriate bay, after which Oxford County staff push the biosolids into higher piles at the back of the bay using the existing loader. There are large passive ventilation panels in the walls to allow for good ventilation and light into the building. The building is not connected to hydro. While there are lights, they would be powered by a portable generator only if needed during times of biosolids removal. The daily transport of the material into the storage facility is done during daylight hours.

Biosolids Production Rate, Type and Destination in 2012

Table 2

FACILITY	2012 Biosolids Land Applied (wet tonnes or m ³ / dry tonnes)	2012 Biosolids Stored BCSF or Thamesford Tank	2012 Raw Sludge Hauled Between Plants	Total Biosolids Generated 2012 Dry tonnes	Biosolids Type	2012 Destination
Woodstock WWTP	4132.76 tonnes/ 983.7 dry tonnes	1016 wet tonnes/ 243 dry tonnes at start of year 575 wet tonnes 138 dry tonnes at year end		3692 wet tonnes 886 dry tonnes	Anaerobic dewatered	Storage Facility & Land Application

Overview of the Storm Water Management Facility for the Biosolids Centralized Storage Facility (BCSF)

The storm water management facility services a total drainage area of 4.85 ha consisting of leaf and yard waste composting pad and a biosolids centralized storage facility (BCSF) located east of the Oxford County Landfill site. It was designed to attenuate storm water runoff from storm events.

Description and Specifications

The facility consists of approximately a 132 m long 300 mm diameter solid pipe running from the compost pad to the forebay; an approximately 50 m long 200 mm diameter storm sewer collecting from areas located east and north of the BCSF to the forebay; and approximately 300 m long perimeter ditches collecting storm water runoff from the BCSF building and from the south and west side of the structure discharging through a 300 mm diameter CSP culvert to the forebay. It also includes one 18 m long 1 m deep forebay, complete with rip rap, two inlet structures and one concrete weir outlet structure discharging to a wet detention pond. The wet detention storm water pond with top dimensions of 78 m long by 38 m wide provides a permanent storage capacity of 1,564 m³ with a depth of 0.9 m. The pond is equipped with an outlet structure consisting of one 1,200 mm diameter precast concrete manhole, one 75 mm diameter orifice plate and approximately 13 m long outlet sewer discharging to Hooper Drain.

Sampling Procedure

Samples are collected semi-annually during spring and fall after a significant rainfall event and analyzed for the following:

Alkalinity
Total Ammonia Nitrogen
Chloride
Iron
Nitrate Nitrogen
Nitrite Nitrogen
TKN
Total Phosphorus
Total Suspended Solids
Sulphate
CBOD
COD
Phenol
pH

Temperature
Conductivity
Dissolved Oxygen

Storm Water Management Facility Performance & Effluent

The facility is inspected regularly and a log book of the inspections is maintained at the BCSF. The results of the sampling program are included in Exhibit 4 in a summary Table.

Spills, Upset and Abnormal Conditions

There were no spills or abnormal discharge events in 2012.

Inspection of the BCSF

The Biosolids Centralized Storage Facility was cleaned and an in-house inspection took place on May 11th, 2012.

Landfill staff swept the building prior to inspection and a contractor was used to pump out the sump pits.

The following is a list of items found during inspection and the actions taken.

Inspection Item	Action Taken
<ul style="list-style-type: none">• There are cracks in the concrete floor at the aisle end of the concrete divider wall of bays 1, 3, 4, 5, 6, 7, 8, 9, 10, 11&12.	No action required at this time, minor cracks.
<ul style="list-style-type: none">• There is a sump pit cover missing in bay 4.	Missing sump pit covers installed.
<ul style="list-style-type: none">• In the centre aisle east of Bay 5 there is a piece of concrete reinforcing steel exposed.	This was addressed last year; however, staff will be removing more exposed steel to avoid any injury.
<ul style="list-style-type: none">• In Bay 12 on the south side near the west end there are two places in the floor that are broken.	No action required at this time.
<ul style="list-style-type: none">• There are minor cracks in the exterior walls on all sides of the building, some have minor staining, but none of them have opened up.	There is no action required.

Summary

The storm water management facility provided effective attenuation of storm water in 2012 with no adverse or abnormal conditions occurring.

The BCSF provided storage for the Oxford County biosolids land application program and was in excellent overall condition. No complaints were received about the operation of either facility in 2012.

NASM Plan Post Application Report

Canfield (Woodstock; East Track 4081, Field 2, East Rotation)

Submission ID: 20970

General Information

Any false or misleading information included in this document may result in non-compliance with any approvals or permits granted, and prosecution in accordance to the provisions of the Nutrient Management Act, 2002.

Compliance with Regulatory Standards

Based on the data supplied in this Post Application Report, the land application practices described in this document are in compliance with regulatory standards.

Agricultural Operation Information

Operator Contact Information
Stuart Canfield
745874 Township Road 4
RR#2
Woodstock, ON, Canada N0J 1L0
Phone #1: 519.860.1475
Owner is the same as the operator

Material Source Summary

Woodstock

Form: Liquid
Category: 3
NASM Type: 11a. Liquid anaerobically digested sewage biosolids
Material Generator: Oxford County
195 Admiral Street
Woodstock, ON, Canada N4S 7W5
Phone #1: 519.537.8531

Metals Content (CM) Level: CM2 (confirmed by lab analysis)
Pathogen Content (CP) Level: CP2 (confirmed by lab analysis)
Odour Category (OC): OC1

Beneficial Use

Total Concentration of PAN, PAP, and PAK: 1452 ppm (Wet Basis)

Wet Basis

Nutrient	Value	
Dry Matter (DM)	3.06 %	
Nitrogen (N)	0.13 %	
Ammonia + Ammonium Nitrogen	338.5 ppm	
Nitrate + Nitrite Nitrogen	< 0.3 ppm	
Phosphorus (P)	0.09 %	
Arsenic (As)	< 0.3 ppm	CM1
Cadmium (Cd)	0.04 ppm	CM1
Cobalt (Co)	0.16 ppm	CM1
Chromium (Cr)	1.95 ppm	CM1
Copper (Cu)	19.75 ppm	CM2
Mercury (Hg)	0.02 ppm	CM1
Molybdenum (Mo)	0.41 ppm	CM2
Nickel (Ni)	2.58 ppm	CM2
Lead (Pb)	0.94 ppm	CM1
Selenium (Se)	< 0.3 ppm	CM2
Zinc (Zn)	29.8 ppm	CM2
E. coli	14461.438 CFU	CP2

Farm Unit Summary

East Track 4081

This farm is a:

 ASM Receiver
 Commercial Fertilizer Receiver
 NASM Receiver

Status: Owned

Farm Location

 County of Oxford, Township of Blandford-Blenheim
 BLANDFORD, Concession: 3, Lot: 9
 BLANDFORD, Concession: 3, Lot: 10
 BLANDFORD, Concession: 3, Lot: 11

 Roll Number(s) 324501001011300
 324501001011400
 324501001010200
 324501001011100
 324501001011000
 324501001010000
 324501001009905

Field Summary

Field 2, East Rotation

Area for Material: 39 ha

Cropping Year Fall 2012 - Fall 2013

Planned Material Application Frequency: Two of Every Five Years

Field Input Description	Agronomic (kg/ha)		Crop Removal (kg/ha)	
	N	P2O5	N	P2O5
 Previous Material N Credit 1 application	3	0	3	0
 Material App 3 October 9, 2012 (actual) Woodstock @ 83 m³/ha Total Applied: 3237 m³ Drag Hose, Not Incorporated Standing Crop	37	68	37	137
 Corn, grain @ 9.9 tonne/ha Planted: May 1, 2013 Harvested: October 25, 2013	-78	-20	-146	-74
 Nutrient Balance August 1, 2012 - October 24, 2013	-38 	48 	-106	63

NASM Minimum Setback Summary

Incorporation Details: Not Incorporated Standing Crop

Wells

Municipal Well	100 m
Drilled Well (15 m deep, 6 m casing)	15 m
Other Well	90 m

Surface Water

Min 3 m vegetated buffer in place	20 m
-----------------------------------	------

Odour

Single Dwelling	25 m
Residential Area, Commercial, Community or Institutional	50 m

Waiting Periods

Pre-Harvest Waiting Period After Application

<u>Crop</u>	<u>Waiting Period</u>
Commercial sod	12 months
Hay and haylage	3 weeks
Tree fruits and grapes	3 months
Small fruits	15 months
Vegetables	12 months
Tobacco	12 months

Pre-Grazing Waiting Period After Application

<u>Livestock Type</u>	<u>Waiting Period</u>
Horses, beef or dairy cattle	2 months
Swine, sheep or goats	6 months

Depth of Unsaturated Soil

<u>Depth</u>	<u>Restrictions</u>
< 30 cm	No application is permitted
30 - 60 cm	Application is permitted if: 1) the land is pre-tilled no more than 7 days before the application AND 2) the maximum application rate is 40 m ³ /ha per 48 hours.
61 - 90 cm	Application is permitted if: 1) the land is pre-tilled no more than 7 days before the application OR 2) the maximum application rate is 40 m ³ /ha per 48 hours.
> 90 cm	No restrictions

NASM Application Summary

Regulated Metals

2 addition(s) over regulated time period

Regulated Metal	Soil Test	This Application	Total Applied	5 Year Limit
Arsenic (As)	4.3 ppm	0.025 kg/ha	0.055 kg/ha	4%
Cadmium (Cd)	1.4 ppm	0.003 kg/ha	0.018 kg/ha	7%
Cobalt (Co)	11.9 ppm	0.013 kg/ha	0.03 kg/ha	1%
Chromium (Cr)	25.9 ppm	0.162 kg/ha	0.436 kg/ha	2%
Copper (Cu)	17.2 ppm	1.639 kg/ha	5.689 kg/ha	42%
Mercury (Hg)	< 0.15 ppm	0.002 kg/ha	0.005 kg/ha	5%
Molybdenum (Mo)	< 0.3 ppm	0.034 kg/ha	0.062 kg/ha	8%
Nickel (Ni)	21 ppm	0.214 kg/ha	0.442 kg/ha	12%
Lead (Pb)	11.9 ppm	0.078 kg/ha	0.226 kg/ha	3%
Selenium (Se)	< 1 ppm	0.025 kg/ha	0.055 kg/ha	20%
Zinc (Zn)	87.9 ppm	2.473 kg/ha	5.46 kg/ha	17%

Total Solids

This application: 2.5 tonne/ha

Total applied over regulated time period: 6.9 tonne/ha (31% of 5 year limit)

Phosphate

Cropping Year	P2O5 Crop Removal Balance
Fall 2009 - Fall 2010	199 kg/ha
Fall 2010 - Fall 2011	-42 kg/ha
Fall 2011 - Fall 2012	-69 kg/ha
Fall 2012 - Fall 2013	63 kg/ha

Net P2O5 balance over regulated time period: 151 kg/ha (39% of 5 year limit)

Post Application Report Attachments

Material Sample Analysis Results

Attach and clearly label the NASM analytical test results. Each NASM sample must be collected, transported and analyzed in accordance with the Sampling and Analysis Protocol. Provide a sample key if required. The number of sample results must comply with "Part IX: Sampling, Analysis and Quality Standards and Land Application Rates" in Ontario Regulation 267/03.

In the current release of NMAN3, the user must average sample results outside of NMAN3 and enter in the average value into NMAN3. Although not required, it is recommended that a summary table of NASM results also be attached which lists out the individual sample results by date and includes the calculated averages used in NMAN3. This summary table will help to speed up the review of the NASM plan as all calculations must be checked.

Soil Sample Results

If new or additional soil analysis has been carried out for the NASM application area since the approval of the NASM plan or the registration of the operation, include those analyses with this document. Each soil sample must be collected, transported and analyzed in accordance with the Sampling and Analysis Protocol.

Maps/Sketches

Post application sketch(es) are based on actual land application activities and conditions that existed at the time of land application. The sketch(es) must address the presence or absence of the following components, and include the separation distances put in place to protect sensitive features:

- field identifier, field boundaries and sections within the field
- field tile drains and the location of the tile inlets and tile outlets
- areas where the soil depth is less than 30 cm and rock outcrops
- areas subject to ponding
- location of dwellings, residential areas and areas of commercial, community or institutional land uses
- location of any municipal wells within 100 metres of the NASM application area
- location of all other known wells within 90 metres of the NASM application area
- location of all surface water within 150 metres of the NASM application area
- maximum sustained slopes within 150 metres of surface water
